1 Introduction

This documentation describes the Virtual Datacenter Cloud Framework (VDCF) for the Solaris Operating System, Version 6.0 and contains a reference of all CLI commands available.

See these other documents for further information:

<i>VDCF – Release Notes</i>	for details about new releases
<i>VDCF – Installation Solaris 10</i>	for information about installing VDCF on Solaris 10
<i>VDCF – Installation Solaris 11</i>	for information about installing VDCF on Solaris 11
<i>VDCF – Administration Guide</i>	for information about VDCF Usage
<i>VDCF – Resource Management</i>	for information about VDCF Resource Management
<i>VDCF – Monitoring</i>	for information about VDCF Monitoring (HW, Resource, OS)

These and all other VDCF documents can be found at:

<http://www.jomasoft.ch/products/VDCF/docs/>

New and changed operations and arguments since VDCF 5.7 are marked **bold** and **green**.

2 Quick Reference – VDCF base

2.1 vdcfadm command

<code>vdcfadm -c show_log</code> [follow] [tail=nn]	lists the content of the message log
<code>vdcfadm -c show_audit</code> [follow] [tail=nn]	lists the content of the audit log
<code>vdcfadm -c clear_log</code> [archive]	clears the message log
<code>vdcfadm -c clear_audit</code> [archive]	clears the audit log
<code>vdcfadm -c show_version</code>	shows the current VDCF version
<code>vdcfadm -c show_config</code> [output]	shows the actual configuration
<code>vdcfadm -c statistics</code>	show VDCF statistics
<code>vdcfadm -c clear_locks</code>	clears eventually hung locks
<code>vdcfadm -c dump_db</code>	create dump files of current database
<code>vdcfadm -c load_db</code> date=<dump date>	load/initialize database from dump files
<code>vdcfadm -c show_node</code> node=<nodename> all	show client pkg version on nodes
<code>vdcfadm -c update_node</code> node=<nodename> all	update client pkg on nodes

2.2 cpool command

```
cpool -c show      [ name=<computepool name> ]  
                  [ parsable [ header ] ]  
  
cpool -c create    name=<computepool name>  
                  comment=<comment>  
                  [ default ]  
                  [ node=<node name list> ]  
  
cpool -c set_default name=<computepool name>  
  
cpool -c assign    name=<computepool name>  
                  [ node=<node name list> ]  
  
cpool -c rename    name=<computepool name>  
                  newname=<new pool name>  
  
cpool -c modify    name=<computepool name>  
                  comment=<comment>  
  
cpool -c remove    name=<computepool name>  
                  [ force ]  
  
cpool -c check     name=<computepool name> | all
```

The following format rules apply to the below listed parameters:

```
lists ::= < element,element,... >
```

2.3 nodecfg command

```
nodecfg -c discover      name=<node name>
                        [ hostname=<hostname> [ nonroot ] ]
                        [ proxy=<PROXY> ]
                        [ add ]

nodecfg -c show         [ name=<node name> [ allif ] ]
                        [ cpool=<computepool name> ]
                        [ all ]

nodecfg -c show_profile [ profile=<platform profile> ]

nodecfg -c create_profile name=<node name>      (interactive)
                        [ setspeed ]

nodecfg -c remove_profile profile=<platform profile>

nodecfg -c add          name=<node name>      (interactive)
                        profile=<platform profile>
                        [ setprobes ]

nodecfg -c add          name=<node name> noprofile

nodecfg -c modify      name=<node name>
                        [ addgroup=<config group list> ]
                        [ remgroup=<config group list> ]
                        [ interface=<network interface>
                          speed=<network speed> ]
                        [ location=<physical location> |
                          serial=<serial no> |
                          hostid=<hostid> |
                          invno=<inventory no> |
                          datacenter=<datacenter> ]
                        [ proxy=<PROXY> | clear_proxy ]
                        [ comment=<comment> ]

nodecfg -c modify_net  name=<node name>
                        interface=<interface or ipmp group name>
                        [ ipaddr=<ip or hostname> ]
                        [ netmask=<netmask> ]
                        [ nettype=<MNGT|PUBL|...> ]

nodecfg -c remove      name=<node name>
```

The following format rules apply to the below listed parameters:

```
lists ::= < element,element,... >
```

2.4 console command

```
console -c add          node=<node name> (interactive)

console -c show        [ node=<node name> ]
                      [ all ]

console -c modify      node=<node name>
                      [ type=<console type> ]
                      [ user=<console user> ]
                      [ protocol=<protocol> ]
                      [ port=<port> ]
                      [ hostname=<hostname/IP> ]

console -c set_pwd     node=<node name>

console -c check       node=<node name> | all

console -c remove      node=<node name>
```

2.5 config command

```

config -c add      type=<config type>
                  name=<name>
                  [ os=all|10|11 ]
                  [ platform=all|sparc|i386 ]
                  [ comment=<comment> ]
                  <args ...>           depending on type

config -c modify  type=<config type>
                  name=<name>
                  [ comment=<comment> ]
                  <args ...>           depending on type

config -c modify  type=<config type>
                  name=<name>
                  [ os=all|10|11 ]
                  [ platform=all|sparc|i386 ]
                  [ comment=<comment> ]

config -c rename  type=<config type>
                  name=<name>
                  newname=<new name>

config -c remove  type=<config type>
                  name=<name>

config -c show    [ type=<config type>
                  [ name=<name> ] ]
                  [ os=10|11 ]
                  [ platform=sparc|i386 ]
  
```

Supported configuration types are:
 COMMAND, DEFAULTROUTE, DNS, FILE, NTP, PKG, ROUTE, SCRIPT, SCSI_VHCI, SERVICES

Type specific arguments:

```

type=COMMAND      command=<command with options>

type=DEFAULTROUTE ipaddr=<ip address of defaultrouter>

type=DNS          domain=<domain>
                  search=<search>
                  server=<server>

type=FILE         source=<file>
                  target=<directory or file>
                  owner=<fileowner>
                  mode=<filemode>

type=NTP          server=<serverlist>

type=PKG          pkgs=<pkg[,pkg,pkg]>
                  pkgdevice=<device>
                  [ options=<pkgadd options> ]

type=ROUTE        destination=<address[/prefix]>
                  gateway=<address>

type=SCRIPT       script=<script>

type=SCSI_VHCI   provider=<provider>
                  productid=<productid>

type=SERVICES     [ enable=<servicelist> ]
                  [ disable=<servicelist> ]
  
```

2.6 serverconfig command

```
serverconfig -c list      default | all | groups | servers  
                        [ type=<config type> ]  
  
serverconfig -c show     default | group=<config group> |  
                        server=<node or vserver>  
                        [ type=<config type> ]  
  
serverconfig -c show_members  group=<config group>  
  
serverconfig -c add      type=<config type>  
                        name=<baseconfig name>  
                        [ server=<node or vserver> ]  
                        [ group=<group> ]  
                        [ section=<section> ]  
                        [ comment=<comment> ]  
  
serverconfig -c modify   type=<config type>  
                        name=<baseconfig name>  
                        section=<section>  
                        [ default | group=<config group> |  
                        server=<node or vserver> ]  
                        [ comment=<comment> ]  
  
serverconfig -c remove   type=<config type>  
                        name=<baseconfig name>  
                        default | group=<config group> |  
                        server=<node or vserver>  
  
serverconfig -c create_group  
                        supergroup=<group>  
                        subgroups=<group,group,...>  
                        [ comment=<comment> ]  
  
serverconfig -c modify_group  
                        supergroup=<group>  
                        subgroups=<group,group,...> |  
                        comment=<comment>  
  
serverconfig -c remove_group  
                        supergroup=<group>  
  
serverconfig -c exec     command=<command>  
                        server=<comma sep list> |  
                        servergroup=<config group> |  
                        serverfile=<abs. path to file>  
                        [ user=<user to run command> | root ]  
  
serverconfig -c exec     type=<COMMAND|SCRIPT|FILE|PKG|SERVICES>  
                        name=<config name>  
                        server=<comma sep list> |  
                        servergroup=<config group> |  
                        serverfile=<abs. path to file>  
  
serverconfig -c exec     group=<config group>  
                        server=<comma sep list> |  
                        serverfile=<abs. path to file>
```

Supported configuration types are:
COMMAND, DEFAULTROUTE, DNS, FILE, NTP, PKG, ROUTE, SCRIPT,
SCSI_VHCI, SERVICES

2.7 build command

```
build -c enable_install    hostname=<hostname>
                           macaddr=<mac address>
                           netmask=<netmask>
                           architecture=<kernel architecture>
                           install_server=<solaris install image>
                           [ be_name=<boot environment name> ]
                           [ profile=<profile name> ]

build -c add_bootserver    install_server=<solaris install image>
                           boot_server=<bootserver directory>

build -c show_bootserver  [ boot_server=<bootserver dir> | refresh ]

build -c remove_bootserver boot_server=<bootserver directory>

build -c create            version=<build version>
                           boot_server=<bootserver directory>
                           archive=<archive location>
                           [ architecture=<kernel architecture> ]

build -c update_archive    version=<build version>
                           archive=<archive location>
                           [ architecture=<kernel architecture> ]

build -c show              [ version=<build version> ]

build -c remove           version=<build version>
```

2.8 flash command

```
flash -c enable_install  node=<node name>
                           [ version=<FLASH version> ]

flash -c disable_install node=<node name>

flash -c list_active     [ node=<node name> ]
```

2.9 node command

```
node -c update          name=<node name> | all
node -c inactivate     name=<node name>
node -c activate       name=<node name>
node -c show           name=<node name> [ verbose ] [ allif ]
node -c show           [ cpool=<compute pool name> ]
                      [ s10 | s11 ]
                      [ parsable [ header ] ]
                      [ all ]
node -c install        name=<node name>
                      [ force ]
                      [ console | wait ]
node -c upgrade        name=<node list>
                      build=<build name>
                      [ trial-run | reboot [ force ] ]
node -c upgrade_check  name=<node list>
                      build=<build name>
node -c upgrade_failback name=<node name>
                      [ reboot ]
                      [ destroy ]
node -c upgrade_finish name=<node list>
node -c console        name=<node name>
                      [ escape=<escape character> ]
node -c remove         name=<node name>
                      [ force ]
node -c boot           name=<node name>
node -c reboot         name=<node name>
                      [ force ]
node -c shutdown       name=<node name>
                      [ force ]
node -c evacuate       name=<node name>
                      [ upgrade ]
                      [ force ]
                      [ shutdown ]
```

```
node -c register      name=<node name>  
                    [ build=<build name> ]  
  
node -c import       name=<node name>  
  
node -c verify       name=<node name> [ update ] | all  
  
node -c enable_install name=<node name>  
                    [ build=<build name> | active ]  
                    [ group_pkg=<pkg name> ]  
  
node -c disable_install name=<node name>  
  
node -c show_enabled [ name=<node name> ]
```

2.10 ipsadm command

```
ipsadm -c show_repo      [ name=<repository name> |  
                        port=<pkg server port no> |  
                        local | oracle |  
                        repository=<remote repository url>  
                        [ ai-pkg ]  
                        [ groups ] ]  
  
ipsadm -c create_repo   name=<repository name>  
                        isofile=<absol. path to repository ISO files> |  
                        dir=<absolute path to dir with zipped SRU files>  
                        [ port=<pkg server port no> ]  
                        [ zpool=<zpool name> ]  
  
ipsadm -c config_repo   name=<repository name>  
                        dir=<absolute path to existing repository dir>  
                        [ port=<pkg server port no> ]  
  
ipsadm -c update_repo   name=<repository name> |  
                        port=<pkg server port no>  
                        [ repository=<url of source repository> |  
                        p5pfile=<absolute path to package archive file> |  
                        isofile=<absolute path to repository ISO file> ]  
                        [ all-versions ]  
                        [ all-pkgs ]  
                        [ trial-run ]  
  
ipsadm -c update_repo   name=<repository name> |  
                        port=<pkg server port no>  
                        dir=<absolute path to dir with zipped SRU files>  
  
ipsadm -c rebuild_repo  name=<repository name> |  
                        port=<pkg server port no>  
  
ipsadm -c remove_repo   name=<repository name> |  
                        port=<pkg server port no>  
  
ipsadm -c show_service  [ name=<install service name> ]  
  
ipsadm -c create_service name=<install service name>  
                        isofile=<install service ISO file>  
  
ipsadm -c create_service name=<install service name>  
                        patchlevel=<0.0.0.0.0>  
                        [ platform=<sparc|i386> ]  
                        [ repository=<url of source repository> ]  
  
ipsadm -c remove_service name=<install service name>  
                        [ force ]  
  
ipsadm -c show_build    [ name=<build name> ]  
  
ipsadm -c create_build  name=<build name>  
                        [ service=<install service name> ]  
                        [ patchlevel=<version to install> |

```

The following format rules apply to the below listed parameters:

```
lists    ::= < element,element,... >
date     ::= <YYYY-MM-DD>
```

3.3 dependadm command

```
dependadm -c show [ vserver=<name> ]

dependadm -c add      master=<vServer list>
                    slave=<vServer list>

dependadm -c remove  master=<vServer list>
                    slave=<vServer list>

dependadm -c remove  vserver=<vServer list>
```

The following format rules apply to the below listed parameters:

```
lists      ::= < element,element,... >
```

4 Quick Reference – VDCF vServer enterprise extensions

4.1 rcadm command (Resource Management)

```
rcadm -c show      [ name=<vServer or node name> ]
                  [ vserver=<vServer> ]
                  [ all ]
                  [ all-states ]

rcadm -c show_perf { node | cpu }

rcadm -c statistics [ all-states ]

rcadm -c set       help

rcadm -c set       vserver=<vServer list>
                  <property>=<property value>
                  [ force ]

rcadm -c unset     vserver=<vServer list>
                  props=<property list>

rcadm -c revert    vserver=<vServer list>

rcadm -c remove    vserver=<vServer list>

rcadm -c clone     vserver=<vServer list>
                  template=<vServer>
                  [ force ]

rcadm -c commit    vserver=<vServer list>
                  [ push ]
                  [ force ]

rcadm -c convert_pool vserver=<vserver>
```

Properties are defined as follows:

CPU_Shares/CPU_cap and CPUs/Importance Properties are mutually exclusive

'CPU_Shares'	Number of Base Units. If CPU_Shares are defined 'CPUs' and 'Importance' are not allowed and FSS based RM is activated
'CPU_cap'	CPU capping in Base Units. 'CPU_Shares' and 'CPU_cap' can be but must not be specified together. They indicate a guaranteed and a maximum CPU entitlement.

-- or --

'CPUs'	Number of CPUs. Requires 'Importance'.
'Importance'	Relative importance of temp pool

General Properties with no additional dependencies

'RAM'	Physical RAM in K,M,G,T
'SWAP'	Virtual Memory in K,M,G,T
'Locked'	Maximum locked down Memory in K,M,G,T
'LWP'	Maximum number of LWPs
'MSG_ids'	Maximum number of Message Queues
'SEM_ids'	Maximum number of Semaphores
'SHM_ids'	Maximum number of Shared Memory Segments
'SHM_Size'	Maximum size of all Shared Memory Segments in K,M,G,T

Sizes are specified as n, n[bB], n[kK], n[mM], n[gG], n[tT] where n is megabytes. The minimum values are: 1048576b, 1024k, 1 or 1m, 1g, 1t.

Properties are not case sensitive!

4.2 rcmon command (Resource Monitoring)

```
rcmon -c status      [ verbose ] [ node ]
