# VDCF - Virtual Datacenter Cloud Framework
for the Solaris™ Operating System

Quick Reference

Version 7.0
25. October 2017

JomaSoft GmbH
Falkensteinstr. 54a
9000 St. Gallen
Switzerland

Table of Contents

1 Introduction

This documentation describes the Virtual Datacenter Cloud Framework (VDCF) for the Solaris Operating System, Version 7.0 and contains a reference of all CLI commands available.

See these other documents for further information:

VDCF – Release Notes	for details about new releases
VDCF – Installation Solaris 10	for information about installing VDCF on Solaris 10
VDCF – Installation Solaris 11	for information about installing VDCF on Solaris 11
VDCF – Administration Guide	for information about VDCF Usage
VDCF – Resource Management	for information about VDCF Resource Management
VDCF – Monitoring	for information about VDCF Monitoring (HW, Resource, OS)

These and all other VDCF documents can be found at:
https://www.jomasoft.ch/products/VDCF/docs/

New and changed operations and arguments since VDCF 6.0 are marked **bold** and **green**.

2 Quick Reference – VDCF Entry Edition

2.1 vdcfadm command

```
vdcfadm -c show_log           lists the content of the message log
         [ follow  ]
         [ tail=nn ]

vdcfadm -c show_audit         lists the content of the audit log
         [ follow  ]
         [ tail=nn ]

vdcfadm -c clear_log          clears the message log
         [ archive ]

vdcfadm -c clear_audit        clears the audit log
         [ archive ]

vdcfadm -c show_version       shows the current VDCF version

vdcfadm -c show_config        shows the actual configuration
         [ output ]

vdcfadm -c statistics         show VDCF statistics

vdcfadm -c clear_locks        clears eventually hung locks

vdcfadm -c dump_db            create dump files of current database

vdcfadm -c load_db            load/initialize database from dump files
           date=<dump date>

vdcfadm -c show_node          show client pkg version on nodes
           node=<nodename> | all

vdcfadm -c update_node        update client pkg on nodes
           node=<nodename> | all
```

2.2 cpool command

```
cpool -c show          [ name=<computepool name> ]
                       [ parsable [ header ] ]

cpool -c create          name=<computepool name>
                         comment=<comment>
                       [ default ]
                       [ node=<node name list> ]

cpool -c set_default     name=<computepool name>

cpool -c assign          name=<computepool name>
                       [ node=<node name list> ]

cpool -c rename          name=<computepool name>
                         newname=<new pool name>

cpool -c modify          name=<computepool name>
                         comment=<comment>

cpool -c remove          name=<computepool name>
                       [ force ]

cpool -c check           name=<computepool name> | all
```

```
The following format rules apply to the below listed parameters:

    lists    ::= < element,element,... >
```

2.3 nodecfg command

```
nodecfg -c discover         name=<node name>
                          [ hostname=<hostname> [ nonroot ] ]
                          [ proxy=<PROXY> ]
                          [ add ]

nodecfg -c show           [ name=<node name> [ allif ] ]
                          [ cpool=<computepool name> ]
                          [ all ]

nodecfg -c show_profile [ profile=<platform profile> ]

nodecfg -c create_profile name=<node name>    (interactive)
                          [ setspeed ]

nodecfg -c remove_profile profile=<platform profile>

nodecfg -c add              name=<node name>    (interactive)
                            profile=<platform profile>
                          [ setprobes ]

nodecfg -c add              name=<node name> noprofile

nodecfg -c modify           name=<node name>
                          [ addgroup=<config group list> ]
                          [ remgroup=<config group list> ]
                          [ interface=<network interface>
                            speed=<network speed> ]
                          [ location=<physical location> |
                            serial=<serial no> |
                            benchmark=<default|baseline|recommended|pci-dss|.>
                            hostid=<hostid> |
                            invno=<inventory no> |
                            datacenter=<datacenter>
                          ]
                          [ proxy=<PROXY> | clear_proxy ]
                          [ comment=<comment> ]

nodecfg -c modify_net       name=<node name>
                            interface=<interface or ipmp group name>
                          [ ipaddr=<ip or hostname> ]
                          [ netmask=<netmask> ]
                          [ nettype=<MNGT|PUBL|...> ]

nodecfg -c remove           name=<node name>
```

```
The following format rules apply to the below listed parameters:

    lists    ::= < element,element,... >
```

2.4 console command

```
console -c add          node=<node name> (interactive)

console -c show        [ node=<node name> ]
                       [ all ]

console -c modify        node=<node name>
                       [ type=<console type> ]
                       [ user=<console user> ]
                       [ protocol=<protocol> ]
                       [ port=<port> ]
                       [ hostname=<hostname/IP> ]

console -c set_pwd       node=<node name>

console -c check         node=<node name> | all

console -c remove        node=<node name>
```

2.5 config command

```
    config -c add      type=<config type>
                       name=<name
                     [ os=all|10|11 ]
                     [ platform=all|sparc|i386 ]
                     [ comment=<comment> ]
                       <args ...>           depending on type

    config -c modify   type=<config type>
                       name=<name>
                     [ comment=<comment> ]
                       <args ...>           depending on type

    config -c modify   type=<config type>
                       name=<name>
                     [ os=all|10|11 ]
                     [ platform=all|sparc|i386 ]
                     [ comment=<comment> ]

    config -c rename   type=<config type>
                       name=<name>
                       newname=<new name>

    config -c remove   type=<config type>
                       name=<name>

    config -c show   [ type=<config type>
                     [ name=<name> ] ]
                     [ os=10|11 ]
                     [ platform=sparc|i386 ]

Supported configuration types are:
COMMAND, DEFAULTROUTE, DNS, FILE, NTP, PKG, ROUTE, SCRIPT, SCSI_VHCI, SERVICES

Type specific arguments:

  type=COMMAND         command=<command with options>

  type=DEFAULTROUTE    ipaddr=<ip address of defaultrouter>

  type=DNS             domain=<domain>
                       search=<search>
                       server=<server>

  type=FILE            source=<file>
                       target=<directory or file>
                       owner=<fileowner>
                       mode=<filemode>

  type=NTP             server=<serverlist>

  type=PKG             pkgs=<pkg[,pkg,pkg]>
                       pkgdevice=<device>
                     [ options=<pkgadd options> ]

  type=ROUTE           destination=<address[/prefix]>
                       gateway=<address>

  type=SCRIPT          script=<script>

  type=SCSI_VHCI       provider=<provider>
                       productid=<productid>

  type=SERVICES      [ enable=<servicelist> ]
                     [ disable=<servicelist> ]
```

2.6 serverconfig command

```
serverconfig -c list          default | all | groups | servers
                            [ type=<config type> ]

serverconfig -c show          default | group=<config group> |
                              server=<node or vserver>
                            [ type=<config type> ]

serverconfig -c show_members   group=<config group>

serverconfig -c add           type=<config type>
                              name=<baseconfig name>
                            [ server=<node or vserver> ]
                            [ group=<group> ]
                            [ section=<section> ]
                            [ comment=<comment> ]

serverconfig -c modify        type=<config type>
                              name=<baseconfig name>
                              section=<section>
                            [ default | group=<config group> |
                              server=<node or vserver> ]
                            [ comment=<comment> ]

serverconfig -c remove        type=<config type>
                              name=<baseconfig name>
                              default | group=<config group> |
                              server=<node or vserver>

serverconfig -c create_group
                              supergroup=<group>
                              subgroups=<group,group,...>
                             [ comment=<comment> ]

serverconfig -c modify_group
                              supergroup=<group>
                              subgroups=<group,group,...> |
                              comment=<comment>

serverconfig -c remove_group
                              supergroup=<group>

serverconfig -c exec          command=<command>
                              server=<comma sep list> |
                              servergroup=<config group> |
                              serverfile=<abs. path to file>
                            [ user=<user to run command> | root ]

serverconfig -c exec          type=<COMMAND|SCRIPT|FILE|PKG|SERVICES>
                              name=<config name>
                              server=<comma sep list> |
                              servergroup=<config group> |
                              serverfile=<abs. path to file>

serverconfig -c exec          group=<config group>
                              server=<comma sep list> |
                              serverfile=<abs. path to file>
```

```
Supported configuration types are:
COMMAND, DEFAULTROUTE, DNS, FILE, NTP, PKG, ROUTE, SCRIPT,
SCSI_VHCI, SERVICES
```

2.7 routecfg command

```
routecfg -c import      node=<node name> | all

routecfg -c verify      node=<node name> | all

routecfg -c show      [ node=<node name> [ full ] | vserver=<vserver name> ]
                      [ destination=<address[/prefix]> ]
                      [ gateway=<address> ]
                      [ parsable [ header ] ]

routecfg -c add         destination=<address[/prefix]> gateway=<address>
                        node=<node name> | vserver=<vserver name>

routecfg -c remove      destination=<address[/prefix]> | destination=all
                      [ gateway=<address> ]
                        node=<node name> | vserver=<vserver name>

routecfg -c revert      node=<node name> | vserver=<vserver name>

routecfg -c commit      node=<node name> | vserver=<vserver name>

routecfg -c diff        server=<vserver1,node2>
```

2.8 build command

```
build -c enable_install    hostname=<hostname>
                           macaddr=<mac address>
                           netmask=<netmask>
                           architecture=<kernel architecture>
                           install_server=<solaris install image>
                         [ be_name=<boot environment name> ]
                         [ profile=<profile name> ]

build -c add_bootserver    install_server=<solaris install image>
                           boot_server=<bootserver directory>

build -c show_bootserver [ boot_server=<bootserver dir> | refresh ]

build -c remove_bootserver boot_server=<bootserver directory>

build -c create            version=<build version>
                           boot_server=<bootserver directory>
                           archive=<archive location>
                         [ architecture=<kernel architecture> ]

build -c update_archive    version=<build version>
                           archive=<archive location>
                         [ architecture=<kernel architecture> ]

build -c show            [ version=<build version> ]

build -c remove            version=<build version>
```

2.9 flash command

```
flash -c enable_install node=<node name>
                      [ version=<FLASH version> ]

flash -c disable_install node=<node name>

flash -c list_active [ node=<node name> ]
```

2.10 node command

```
node -c update      name=<node name> | all

node -c inactivate  name=<node name>

node -c activate    name=<node name>
                  [ force ]

node -c show        name=<node name> [ verbose ] [ allif ]

node -c show      [ cpool=<computepool name> ]
                  [ s10 | s11 ]
                  [ parsable [ header ] ]
                  [ all ]

node -c install     name=<node name>
                  [ force ]
                  [ console | wait ]

node -c upgrade     name=<node list>
                    build=<build name>
                  [ trial-run | reboot [ force ] ]

node -c upgrade_check name=<node list>
                    build=<build name>

node -c upgrade_failback name=<node name>
                  [ reboot ]
                  [ destroy ]

node -c upgrade_finish   name=<node list>

node -c console     name=<node name>
                  [ escape=<escape character> ]

node -c remove      name=<node name>
                  [ force ]

node -c boot        name=<node list>

node -c reboot      name=<node list>
                  [ force ]

node -c shutdown    name=<node list>
                  [ force ]

node -c evacuate    name=<node name>
                  [ upgrade ]
                  [ force ]
                  [ shutdown ]

node -c register    name=<node name>
                  [ build=<build name> ]

node -c import      name=<node name>
                  [ nodeonly ]

node -c verify      name=<node name> [ update ] | all
node -c assess      help

node -c assess      name=<node name> | all
                  [ benchmark=default|baseline|recommended|,pci-dss|... ]
                  [ vserver ]

node -c harden      help

node -c harden      name=<node name>
                    profile=<hardening profile>

node -c enable_install name=<node name>
                  [ build=<build name> | active ]
                  [ group_pkg=<pkg name> ]

node -c disable_install name=<node name>

node -c show_enabled [ name=<node name> ]
```

2.11 ipsadm command

```
ipsadm -c show_repo      [ name=<local repository name> |
                           port=<local pkg server port no> |
                           local | oracle |
                           repository=<remote repository url>
                         [ ai-pkg ]
                         [ groups ] ]

ipsadm -c create_repo      name=<repository name>
                           isofile=<absolute path to repository ISO files> |
                           dir=<absolute path to existing directory with
                                zipped SRU files>
                         [ port=<pkg server port no> ]
                         [ zpool=<zpool name> ]

ipsadm -c config_repo      name=<repository name>
                           dir=<absolute path to existing repository
                                directory>
                         [ port=<pkg server port no> ]

ipsadm -c update_repo      name=<repository name> |

 rcadm -c set       help

 rcadm -c set       vserver=<vServer list>
                    <property>=<property value> ...
                  [ force ]

 rcadm -c unset     vserver=<vServer list>
                    props=<property list>

 rcadm -c revert    vserver=<vServer list>

 rcadm -c remove    vserver=<vServer list>

 rcadm -c clone     vserver=<vServer list>
                    template=<vServer>
                  [ force ]

 rcadm -c commit    vserver=<vServer list>
                  [ push ]
                  [ force ]

 rcadm -c convert_pool vserver=<vserver>

Properties are defined as follows:

CPU_Shares/CPU_cap and CPUs/Importance Properties are mutually exclusive
 'CPU_Shares'         Number of Base Units. If CPU_Shares are
                      defined 'CPUs' and 'Importance' are not
                      allowed and FSS based RM is activated
 'CPU_cap'            CPU capping in Base Units. 'CPU_Shares'
                      and 'CPU_cap' can be but must not be
                      specified together. They indicate a
                      guaranteed and a maximum CPU entitlement.
    -- or --

 'CPUs'               Number of CPUs. Requires 'Importance'.
 'Importance'         Relative importance of temp pool

General Properties with no additional dependencies
 'RAM'                Physical RAM in K,M,G,T
 'SWAP'               Virtual Memory in K,M,G,T
 'Locked'             Maximum locked down Memory in K,M,G,T
 'LWP'                Maximum number of LWPs
 'MSG_ids'            Maximum number of Message Queues
 'SEM_ids'            Maximum number of Semaphores
 'SHM_ids'            Maximum number of Shared Memory Segments
 'SHM_Size'           Maximum size of all Shared Memory Segments
                      in K,M,G,T

Sizes are specified as n, n[bB], n[kK], n[mM], n[gG], n[tT] where n is
megabytes. The minimum values are: 1048576b, 1024k, 1 or 1m, 1g, 1t.
Properties are not case sensitive!
